Allowable Subject Matter

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Soma et al teach (col. 3, lines 51-60) quantitatively measuring degradation of ceramics with X-ray diffraction. Soma teaches (ABSTRACT) measurement of deterioration of ceramic material.

The following is a statement of reasons for the indication of allowable subject matter: Claim 1 is allowable as the prior art neither teaches nor suggests the combination of the last 5 lines ("measuring a difference ...less than a preselected value") with remaining limitations of the claim. Note was made of both page 5 (lines 2-11 from the bottom of the page of Applicants' written specification) and Figure 3, which provide for the importance of the claim's "difference" (line 5 from bottom of claim) and "preselected value" (last two lines of claim 1) terminology to distinguish between materials that will undergo "premature failure" (line 3 from bottom of page 5) from those materials that are acceptable "for implant" (line 3 from bottom of claim 1). Claim 15 is allowable as the prior art neither teaches nor suggests the combination of the last 6 lines with remaining limitations of the claim
